SUMMARY

Full-stack developer with 6+ years of experience building enterprise web applications with Angular, Java, .NET Core and Node.js, currently an SDE II at Deloitte. Experienced in dashboards, REST APIs, cloud deployment on AWS and IBM Cloud, and data-driven features using Python and machine learning, delivered in Agile teams across HR, transport, retail and fintech domains.

EDUCATION

Indian Institute of Technology, Roorkee — *Roorkee, Uttarakhand*
PG Certificate in Data Science — *December 2021 – December 2022*

THDC Institute of Hydropower Engineering and Technology — *New Tehri, Uttarakhand*
B.Tech in Computer Science — *July 2014 – August 2018*

EXPERIENCE

Deloitte — *Gurugram, Haryana*
SDE II — *June 2026 – Present*
- Developing backend services and RESTful APIs using Java to support Angular-based enterprise web applications.
- Deploying and managing application workloads on AWS, enabling scalable and reliable cloud releases.
- Delivering full-stack features end to end, from Angular user interfaces to Java services, within an Agile team.

Consultant — *November 2025 – May 2026*
- Built and deployed Angular-based web solutions using a modular, reusable component architecture.
- Participated in Agile ceremonies, improving sprint deliverables by adhering to iterative development practices.

IBM — *Mysore, Karnataka*
Application Developer — *July 2024 – October 2025*
- Built scalable and reusable Angular components for dynamic web applications, optimizing performance.
- Designed advanced mentor search functionality using RxJS operators, reducing search latency.
- Integrated Angular with IBM Cloud services, ensuring seamless deployment and scaling of applications.
- Built scalable, reusable backend services using Node.js to support the Angular front end.

Freelancer — *Remote*
Freelance Software Engineer — *November 2023 – June 2024*
- Developed an Angular-based multi-service booking platform with integrated payment gateways and API-driven architecture.
- Built a maintenance tracking and reporting system for British Railways (Angular, .NET Core), enhancing operational efficiency.
- Optimized web application SEO, improving page load times and search engine rankings.
- Built RESTful APIs using .NET Core, implementing CRUD operations with efficient routing mechanisms.

Anicca Data Science Solutions — *Bangalore, Karnataka*
Software Engineer — *November 2022 – October 2023*
- Engineered inventory dashboards using Angular for real-time tracking, enhancing visibility into stock levels.
- Automated forecasting processes using Python DAGs and implemented machine learning models for predictive analytics.
- Conducted exploratory data analysis (EDA) and data visualization using Pandas, enabling data-driven decisions.
- Automated end-to-end testing using Cypress, ensuring robust software releases.

Gloify — *Bangalore, Karnataka*
Software Engineer — *May 2022 – October 2022*
- Built and deployed Angular-based web solutions integrated with Python APIs for backend processing.
- Enhanced web applications for SEO compliance.
- Streamlined development workflows by implementing modular code structures and conducting code reviews.

Vidhikara — *Rishikesh, Uttarakhand*
Software Developer — *February 2020 – April 2022*
- Designed Angular-based frontend interfaces for web applications, improving user experience and engagement.
- Developed .NET Core APIs with CRUD operations to serve the Angular front end.
- Collaborated on Python-based projects, delivering scalable solutions for data analysis and system automation.

SKILLS

Programming Languages:	Python, Java, Ruby, C#, SQL, JavaScript, TypeScript
Web Development:	Angular, AngularJS, RxJS, .NET Core, Node.js, HTML, CSS
Testing:	Cypress
Data Science:	Data Preprocessing, Machine Learning, Pandas, Data Visualization
Database Management:	SQL
Cloud:	AWS, IBM Cloud
Version Control:	Git
General:	Agile Methodologies, SEO, Problem Solving, Team Collaboration

PROJECTS

Eli Lilly (Reese and Taffy)

Angular, Java, AWS

Pharmaceutical web application for medical researchers to gather and manage clinical data. Built with an Angular front end and Java services hosted on AWS, it gives researchers a streamlined interface for capturing clinical information in a scalable cloud environment.

Definity Insurance

AngularJS, Ruby

Property insurance purchasing application for home, condo and apartment coverage. Built with AngularJS and Ruby, it lets customers buy the right policy for their property through a streamlined online experience.

IBM Internal

Angular, Node, Git

Web application designed to manage and structure internal employee data efficiently. It enables IBM employees to track and achieve various internal roles and milestones within the organization.

Instinct

Angular, .NET Core, Git

Reporting tool developed for the British railway system to streamline maintenance scheduling and inventory management. Features real-time data visualization and seamless integration with existing systems, enhancing operational efficiency and ensuring adherence to safety protocols so teams can deliver reliable railway services.

Flexfier

Angular, Git

Responsive web application for booking hotels, flights and car rentals, designed to provide seamless user experiences while adhering to SEO best practices. Its intuitive interface and robust search capabilities improved visibility and user engagement.

Inventory Planner

Angular, Python, Machine Learning

Data-driven inventory management tool designed to optimize stock levels and predict sales trends. By leveraging machine learning models and real-time dashboards, businesses can forecast demand with precision. The platform automates data workflows, reducing manual processes and improving inventory planning accuracy.

RFM McDonald's Dashboard

Angular, Git, Cypress

Comprehensive store management system tailored for McDonald's restaurant operations. The dashboard integrates multiple systems, including HR and POS, to streamline operational workflows. Real-time visualizations and analytics empower managers to optimize store performance, while automated Cypress tests ensure reliability.

Koshex

Angular, Git, Python, SEO

Platform for managing mutual fund investments and savings, designed to help users achieve their financial goals. Features real-time portfolio tracking, goal-based investing tools and personalized recommendations, with integrated data flows and a seamless user experience that builds confidence in financial planning.

Televisory

Angular, Git

Global stock market analysis platform built with Angular, offering tools for real-time data visualization, portfolio management and historical trend analysis. Investors and traders can customize alerts and derive actionable insights in a user-friendly interface.

Aikone & GPS

Angular, .NET Core, SQL, Git

GPS-based fleet tracking solution designed to enhance transportation efficiency and safety. The dashboard provides real-time insight into speed, driving behavior and route adherence, and advanced alerts let stakeholders address issues proactively, improving decision-making and fleet reliability.
